1 OVERVIEW

• 1.1 INTRODUCTION

City of Ekurhuleni (COE) has a mandate to promote the Smart City concept for transformation, growth, development and ensure that all Ekurhuleni's citizens derive sustainable benefit from technology development. The Information and Communication Technology (ICT) department has a responsibility to ensure that ICT goals are aligned to and support the City's mission and strategic objectives of becoming a Smart, Creative and Developmental City, and that optimum business value is realized from ICT related investment services and assets. Information and Communication Technology (ICT) is one of the key strategic enabling department within the City. It uses and leverage on the implementation of technology to enable the City to deliver services effectively and efficiently.

Figure 1: City Model

The municipal reference model has been set as a standard capability reference for all the departments. It illustrates the core, enabling/ support functions and its relevant systems, and the different stakeholders involved.

Governance and Monitoring is an overarching capability providing an oversight to all capabilities in the municipality.

Strategy capability is responsible for all planning and budget related capability for the CoE municipality. Evaluating existing business unit strategy based on the company's strategy and eliminate unwanted/unnecessary resources/elements and re-consider necessary resources to meet the overall company's strategy.

Core capability is all the municipality business processes mandated by the municipal act, to provide all constitutionally mandated services as prescribed by the Section 4 B and Schedule 5 Part B of the constitution.

Enabling/Supporting capability is all the transversal function within the municipality, that provide support to core process with a view to deliver the municipal mandated services.

Enabling Technology is all the systems/ applications used by the municipality to support internal business process, each capability layer will comprise associated applications.

2 GENERAL SYSTEM INFORMATION

Property Letting is one of the revenue generating streams within EHC, which is an entity owned by the city, its mandate is to manage the leasing of city owned flats, which are for social housing to people earning between R3500 and R15 000. EHC does not have any system to support their leasing function. Most of the processes are still managed manually using spreadsheets which has negative effect on operations and the reporting thereof. There is a need to implement a fully integrated system, that will support the Property Lease Management capability end to end for EHC.

3 LEARNING REQUIREMENTS

It is expected that learners have the following pre-requisites:

- Computer literacy
- A good understanding of the Property Lease Management system (PLM)
- Learners with special learning needs are required to inform their manager and the trainer.

This User Guide is intended for the following audience:

- System Administrator
